

The illustrated Life Story of Wine

with
Sondra Barrett, PhD

Shaping Taste, Tasting Shape (introductory program)

Discover your sense of taste in a whole new way with science and art. Colorful and compelling photomicrographs of molecules and wine illuminate this lecture of what shapes our taste. Learn how to enhance your sensory pleasure of wine and food. Improve the taste of any wine. Delving into the language of taste, we consider whether the words we use are rooted in our instinctual knowledge or our imagination. We will even enjoy an imaginary glass of wine. This lecture brings to light the knowledge hidden in our senses, molecules, wine and taste.

Sondra Barrett, PhD, biochemist, photographer and author of *Wine's Hidden Beauty*, was bitten by the wine bug in 1984 when she was artist-in-residence for Sterling Vineyards and has been exploring the hidden world of wine ever since. Teaching globally mindbody health and sensory education, she also delivers unique visual winetasting events and compelling art that shows the life of wine. Her award-winning photomicrographs make visible the invisible.

This is for a 2 hr presentation without actual wine tasting. A custom show with winetasting is even more fun.

Other sessions:

- Fermentation - primary and secondary malolactic
- Aging
- Food and Wine
- Wine and Health
- WineFullness
